Carry Tactics - a must if you carry a firearm!

WHEN SHOULD YOU UNLOAD YOUR FIREARM?

- Always empty your firearm when in doubt.
- After you're through shooting, discharge your weapon.
- Never make an assumption; always check to verify if a firearm is empty.
- Restrict unauthorised access to weapons by children, spouses, relatives, or others.

SHOULD A GUN'S "SAFETY" BE TRUSTED?

- Never place your confidence in your firearm's safety. It has a chance of failing.
- When the safety is switched on with a push or pull, or with a fast jolt, firearms can discharge.
- Unless you're ready to shoot, always keep the safety on. When in doubt, activate safety.
- Set the safety to "fire" just when you are ready.

What if a gun accidentally discharges at the incorrect target?

- Once shot, a bullet cannot be returned.

- "Prevention is better than cure" when it comes to gun safety.

- It is possible that firing at an inopportune moment or in reaction to a noise is dangerous.

- Take your time before squeezing the gun unless your life is in danger.

- Remember that a bullet might be redirected and miss its target while still travelling a significant distance.

Can we experiment with AMMUNITION?

- Use corrective ammunition at all times.

- A single erroneous caliber might result in personal harm or gun damage.

- Read and follow all of the gun's instructions and cautions.

- Always examine the ammo before loading it; otherwise, the gun may be damaged.
